

Vanguard Freight

Regional road-freight, Benelux & western Germany

Vanguard Freight — Company Overview

Vanguard Freight is a regional road-freight carrier operating a fleet of 480 trucks across the Benelux and western Germany. We move palletized goods for retail and manufacturing clients on next-day and two-day service levels, with three cross-dock hubs and roughly 620 drivers.

Where we are under pressure

Dispatch is still largely manual, so vehicles sit idle while planners assign the next load — an average of 1.9 hours per vehicle per day. Rising fuel and driver costs are squeezing margins, our largest clients are demanding tighter delivery windows, and we struggle to produce the carbon reporting they increasingly require. Our planning tools are ageing and don't talk to each other.

Our priorities this year

Cut idle time and empty running, lift on-time performance for key accounts above 95%, and put credible numbers behind a sustainability story. We are pragmatic buyers: we want proof on a paid pilot before any fleet-wide rollout, and tools that integrate with the telematics we already run.

Fleet at a glance

Attribute	Value
Vehicles	480 trucks
Region	Benelux + W. Germany
Avg. idle time / vehicle / day	1.9 hours
On-time delivery (current)	86%
Empty-running share	22%
Drivers	~620
